

## St. Tropez™ Rose

*Rosa 'ORAsyda'*

Height: 4 feet

Spread: 4 feet

Sunlight: ○

Hardiness Zone: 6a

Other Names: Rose Alleyson Rose

Group/Class: Floribunda Rose

### Description:

This elegant, bushy shrub produces full, ruffled, apricot-orange blooms in flushes all season long, with a strong anise fragrance; flowers are borne mostly solitary; needs full sun and well-drained soil; vigorous with good disease resistance

### Ornamental Features

St. Tropez Rose features showy fragrant fully double orange flowers with peach overtones at the ends of the branches from late spring to mid fall. The flowers are excellent for cutting. It has forest green deciduous foliage. The glossy oval compound leaves do not develop any appreciable fall colour.

### Landscape Attributes

St. Tropez Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance shrub that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease
- Spiny

St. Tropez Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

## Planting & Growing

St. Tropez Rose will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
